Activities Days 3 – 5	
Activity #2	Create a model of the ocean floor and points for a topographical map
Time	Approximate time to complete this activity: 1 day (class period)
Materials	<ul> <li>1 box such as a shoe box or small rectangular box, with a lid if possible</li> </ul>
	<ul> <li>Aluminum foil or heavy paper to use for a box lid, if box is without a lid</li> </ul>
	<ul> <li>Clay, rocks, gravel, sand and/or other materials to create a sea floor and features</li> </ul>
	o Ruler
	<ul> <li>Black felt tip marker</li> </ul>
	<ul> <li>Paper that is the size of the top of the box</li> </ul>
	<ul> <li>Masking tape</li> </ul>
	o Scissors
Guiding Questions	
1. What does the ocean floor look like?	
2. Are there any ocean feature you can identify?	
Plan - Diana for part 1 of activity:	
<ul> <li>Plans for part i of activity.</li> <li>Create a model of the ocean floor and points for the topographical map.</li> </ul>	
<ul> <li>Detailed instructions and materials can be accessed at:</li> </ul>

<u>Intp://seagrant.uai.edu/maine-eu/currculum/images/stones/grade6/grid_model_seanoor_boxtop.pdf</u> Cuiding Questions to selk during this port of the set init if	
• Guiding Questions to ask during this part of the activity:	
<ul> <li>What does the sea hoor like?</li> <li>Do you potico any features that you can identify?</li> </ul>	
Anticipated Student Responses to guiding guestions:	
1 The ocean floor is not flat. It gradually slopes from the coast, then drops dramatically down to	
the aby	sal plain. There are mountains rising from the ocean floor.
<ul> <li>Plans for part 2 of activity:</li> </ul>	
2. On student models label energy sites (tidal, wind, oil, gas) that are currently being utilized from discussion	
and research on Day 2.	
<ul> <li>Guiding Questions to ask during this part of the activity:</li> </ul>	
<ul> <li>What are the most common sources energy being developed off the coast of Virginia?</li> </ul>	
<ul> <li>Anticipated Student Responses to guiding questions:</li> </ul>	
o The oce	an floor is not flat. It has mountains and trenches.
• There are parts that are shallow and other parts that are very deep, use names of ocean floor.	
Differentiation	Strategy 1: Students will work with partners that have been chosen for them to utilize
	strengths.
ELL	Modification: Student will work with another student with whom she/he works well.
Modification	
Check for	How you will assess or check for student understanding throughout this activity.
Understanding	g Quick assessment: Label an example of the ocean floor.
